

Furthering Futures' career immersion programme for talented female STEM students Monday 28 – Thursday 31 October 2019

At Jaguar Land Rover, we believe that recruiting the brightest minds is key to succeeding in the rapidly changing global business environment. Only 9% of engineers in the UK automotive industry are female. While attracting talent today is more competitive than ever, things are changing for the better.

We are tackling the attitude that engineering is a male-dominated industry head-on by inspiring young people to explore the next generation of exciting career opportunities in science, technology, engineering and maths.

Our 'Furthering Futures' career immersion programme has been designed for talented female STEM GCSE and A-Level students who are interested in Jaguar Land Rover's Apprentice, Undergraduate and Graduate programmes and would like to learn more about the opportunities and application process before they apply. The programme will be a mix of empowering talks, interactive sessions and career advice delivered by our passionate female engineers plus there will be plenty of opportunities to network.

Our next course will take place from **Monday 28 - Thursday 31 October** and will be based at our **Gaydon Design and Engineering Centre near Warwick**.

Interested students who meet the recruitment criteria* for the programme they are interested in can go to www.jaguarlandrovercareers.com for more information or to apply for a place from Wednesday 4 September. All application forms must be submitted by 4pm on Monday 30 September. Places will be confirmed on Monday 7 October.

Please note: we will accept applications from students who live in the UK but participants must cover their own travel expenses and be able to make their own way to Gaydon each day.

Yours sincerely,

Holly Jago
